

# PTFE (TEFLON) GASKET

## Features

- Excellent flexibility, resilience, creep resistance
- High temperature resistance
- Excellent corrosion resistance, aging resistance
- Self-lubricating

## Application

- It has an effect of sealing, conditioning oil, thermal (heat), orientation (support), which is widely used in a variety of power machinery

## Main Technical Indicator

Property	Unit	Pure PTFE Result
Apparent density	g/cm <sup>3</sup>	2.10~2.30
Tensile strength	Mpa	≥15
Ultimate elongation	%	≥150

## Categories

PTFE (Teflon) Elastic tape	Produced by molding and mechanical processing of suspension PTFE resin	
	Pure gasket	100% Pure PTFE to make gasket
	Filled gasket	Fill different materials according to customer requirements, such as carbon powder, polystyrene, glass fiber, graphite, copper powder, etc

## Specifications

Wide range of categories, can be processed according to customer requirements.
